CC C. FUNCTION: Probably involved in periplasmic detoxification of copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake copper by oxidizing Cu(I) to Cu(II) and thus preventing its uptake cu(II) and thus preventing its uptake cu(II) and thus preventing its uptake cu(II) and thus preventing its uptake cu(II) and thus preventing its uptake cu(II) and thus preventing its uptake cu(II) and thus preventing its uptake cu(II) and thus preventing its uptake cu(II) and thus preventing its uptake cu(I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 21

"Role of the fixGHI region of Azorhizobium caulinodans in free-living and symbiotic nitrogen fixation.";

FEMS Microbiol. Lett. 114:185-189(1993).

-i- FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C OR A QUINOL ARE TRANSFERRED TO THE BIMETALLIC CENTER FORMED BY A HIGH-SPIN HEME AND COPPER B.

-i- CATALYTIC ACTIVITY: 4 ferrocytochrome c + O(2) = 4 ferricytochrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Azorhizobium caulinodans.

Fatty acid transport protein impairs uptake homologue to the murine fatty acid transport protein impairs uptake and growth on long-chain J. Biol. Chem. 272:8531-8538(1997).

J. Biol. Chem. 272:8531-8538(1997).

-! FUNCTION: MAY BE INVOLVED IN LONG-CHAIN FATTY ACIDS UPTAKE, AND PRIOR TO METABOLIC UTILIZATION. MAY PLAY AN IMPORTANT ROLE IN UPTAKE OF THESE HYDROPHOBIC COMPOUNDS UNDER CONDITIONS WHERE FAI ACID SYNTHESIS IS COMPROMISED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VARIANT

Proc. Natl. Acad. Sci. U.S.A. 90:1536-1540(1993).

-i- FUNCTION: MIGHT FUNCTION AS A CALCIUM-SEQUESTERING "SPONGE" TO REGULATE THE AMOUNT OF FREE CYTOPLASMIC CALCIUM. IT BINDS 0.3 MOLOF CAL2 PER MOL OF PROTEIN.

-i- SUBGULIT: HOMODIMER (PROBABLE).

-i- SUBCILILLAR LOCATION: CYTOPLASMIC; HYPODENSE COMPARTMENT.

-i- TISSUE SPECIFICITY: SOMA AND AXONS OF PHOTORECEPTOR CELLS OF COMPOUND EYES AND CCELLI.

DEVELOPMENTAL STAGE: EXPRESSED EARLY IN PHOTORECEPTOR CELL DEVELOPMENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=93165729; PubMed=8094559;

Proc. Natl. Acad. Sci. U.S.A. 89:10144-10148 (1992).

-i- TISSUE SPECIFICITY: EXPRESSED PREDOWLNANTLY IN INTERNAL ORGANS
SUCH AS ADRENAL GLAND, PANCREAS AND KIDNEY.

-i- PIM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING
UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

-i- SIMILARITY: BELONGS TO THE FIBRIL-ASSOCIATED COLLAGENS WITH
INTERRUPTED HELICES (FACIT) FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SBQUENUM FACE CORD;

White C.N., Rivin C.J.;

Submitted (JUN-1994) to the EMBL/GenBank/DDBJ databases.

-i- FUNCTION: BINDS 5 MOLECULES OF ZINC. MAY HAVE A ROLE IN ZN(2+)

HOMEOSTASIS DURING EMBRYOGENESIS (BY SIMILARITY).

-i- SIMILARITY: BELONGS TO THE METALLOTHIONEIN SUPERFAMILY; FAMILY 15.
